

**AMENDMENTS TO THE SPECIFICATION**

**Please amend the paragraph at page 19, line 6, as follows:**

To further promote stable foreign body capsule structure without interfering with angiogenesis, an additional outermost layer of material comprised of a thin low-density non-woven polyester (e.g., manufactured by Gore) can be laminated over the preferred PTFE described above. In preferred embodiments, the thickness of this layer is about 120  $\mu\text{m}$ . This additional thin layer of material does not interfere with angiogenesis and enhances the manufacturability of the angiogenic layer. [See U.S. Patent No. 5,453,278 to ~~Brauer~~ Chan et al., hereby incorporated by reference; PCT Patent Publication Nos. 96/32076, 96/01611, and 92/07525 assigned to Baxter].
